Military Command 64518

On the basis of the analysis of the factors of danger of emergencies, which can arise on chemically hazardous objects, the main requirements to means of individual and collective protection used at realization of activities on liquidation of consequences of toxic chemical releases are formulated. The directions of perfecting of an existing system of means of individual and collective protection for maintenance of a demanded level of safety of an implementation on liquidation of chemical emergencies are shown. The proposals on the use of means of individual and collective protection in different zones of danger at emergency conditions are developed.
